“ While our patients have many sperm banks to choose from, we like when they choose Seattle Sperm Bank because of the **QUALITY OF THE SPERM SAMPLES**. The samples thaw well and the number of motile sperm recovered is always very high. I always feel comfortable recommending that patients use Seattle Sperm Bank, both because of the sample quality but also because of the **VERY COMPETITIVE PRICING** per vial.”

- Glen Adaniya, Ph.D.
Medical Lab Director, Ovation Fertility

You are about to embark upon an amazing journey.

As you start the process, Seattle Sperm Bank is here to support you every step of the way. **Our role is to provide the guidance and expertise you need to find the best donor for you.**

This catalog provides an overview of the process highlighting the support and service that we provide to you along the way. Our goal is to get to know you so that we can help guide you to your donor of choice. We encourage you to contact us for a more in-depth consultation or to visit our website at www.seattlespermbank.com.

ABOUT SEATTLE SPERM BANK: Guiding. Facilitating. Reassuring.

The goal of our team is to help you achieve your dreams of conception, pregnancy and parenthood. Our focus is about combining a personal, compassionate approach with uncompromising medical expertise and the very best in donor selection.

Seattle Sperm Bank was founded on a simple mission; to help create happy, healthy families, to always advocate for our customers and our donors, and to become a global leader in the scientific advancement of sperm distribution.

To date, we have helped create over 10,000 families across the world, and it gives us great pleasure to say that we have more than realized our original ambitions. As we look ahead, we look forward to remaining one of the nation's leading and most recommended sperm banks, with uncompromising vial quality, and the utmost in customer care.

With four locations in Seattle, WA; Bellevue, WA; Tempe, AZ; and San Diego, CA, we're continuing to grow our company and expand our catalog of donors to give you even more outstanding donors to choose from. We're also increasing our number of partnerships with affiliated fertility clinics across the country and stretching farther across the globe to provide much-needed services to International recipients.

We are truly humbled that our reputation for being a compassionate, affordable, and trustworthy provider of donor sperm has allowed us to continue to grow and succeed. We thank you for considering us to be part of this very exciting time in your life, and we hope you will not hesitate to contact us if there is anything we can do to help you during your journey.

Sincerely,
Seattle Sperm Bank Staff

ACCREDITATIONS & LICENSES

Proudly Registered and/or Licensed by the following:

WHY CHOOSE SEATTLE SPERM BANK:

We continue to offer the industry’s best value on high quality, Open ID vials with exceptional customer service and extended genetic screening.

Here are several ways we distinguish ourselves from other Sperm Banks:

- **Price** – Compared to our largest competitors, we can save patients 25%-50% per shipment. We offer the simplest and most transparent pricing structure in the industry. Our \$50 All-Access Pass, low vial prices, low shipping costs, and lack of add-on fees work together to make this entire process more affordable.
- **Dedicated Patient Service** – We offer a personalized customer service experience. This includes free photo matching, free personalized assistance with donor selection, and free genetic consultations. We know our donors! Every patient has the opportunity to speak with someone who interacts with the donor on a regular basis.
- **Vial Quality** – We receive a tremendous amount of positive feedback from clinics and labs who see our vials on a regular basis. Our lab staff pride themselves on creating the best quality vials. We receive complaint forms on less than 0.1% of vials distributed.
- **Advanced Genetic Testing** – SSB was the first sperm bank to offer extended genetic screening on ALL NEW DONORS in 2015, and we have continued to lead the way in genetically screening our donors. We have extended our current testing to Myriad Foresight™ Carrier Screen, which includes testing for 175 conditions. If patients know they are carriers for conditions not covered by our testing, we are very accommodating in helping them get a donor tested for that condition at a reasonable price. Our website has an advanced search tool where carrier screening results can be used for filtering our available donors.
- **Donor Counseling** – We are the only sperm bank to have all donors counseled by a Master of Social Work. This consultation helps donor applicants understand the full implications of being a donor and the possibility of future contact with offspring.
- **Criminal Background Checks and Donor Records Verification** – We use a third-party criminal background check company to research all donor applicants. We also verify their educational transcripts.
- **Family Planning & Sibling Storage** – We offer programs that are specifically designed to help patients reach their family goals whether it is a single child or planning for future siblings.
- **Accreditations** – We are accredited and/or licensed by the following: FDA, CLIA, New York State, State of Maryland, and the State of California.

PRICE COMPARISON – OPEN ID DONORS

CRYOBANK	IUI COST	ICI COST	SHIPPING COST
Seattle Sperm Bank	\$850	\$850	\$100 - \$280
California Cryobank	\$995	\$995	\$245 - \$330
Fairfax Cryobank	\$1,155	\$1,060	\$260 - \$420
Xytex	\$1,195	\$1,195	\$210 - \$240

IUI ART and ICI ART vials are available for \$650. These vials are primarily suited for IVF or ICSI treatments. For more information about ART vials, please see page 14, or visit our website.

OUR COMMITMENT TO HELPING ALL FAMILIES.

We know every journey is unique and we are here to support you.

Seattle Sperm Bank has helped thousands of LGBTQ+ families and Single Moms by Choice achieve their goals of conception, pregnancy, and childbirth. We are committed to being an ally, partner, and resource to help create happy, healthy families for all. Here are some specific services that you may find helpful in building your family:

- **Personalized Client Services** - We offer a personalized customer service experience, including 1-on-1 assistance with donor selection and free consultations. We're here to listen and help.
- **Free Photo Matching** - We know our donors personally and will help you find an excellent match using photos of your choice.
- **Family Planning & Sibling Storage** - We offer comprehensive family planning programs, including discounted Sibling Storage if one or both partners plan on having more than one child from the same donor.
- **Easy Vial Transfer** - If both partners are trying to conceive, you can easily transfer vials between partners without having to pay for a separate account or pay a vial transfer fee.
- **Second Parent Adoption** - Assistance providing necessary paperwork to complete your second parent adoption if needed.
- **SSB Connects** - Our private donor sibling registry to help facilitate mutually desired contact between families who share a common donor.
- **No Add-On Fees** - We have the most transparent, straightforward pricing in the industry. On average, we can save your family 25-50% per shipment with competitive vial prices, shipping costs, and zero add-on fees.

“Working with Seattle Sperm Bank was a wonderful experience. When I was browsing through the donor profiles I felt like I was really meeting the donors. I learned about their personalities and why they choose to become donors. For me personally I felt like the donor I choose was a perfect match when I learned that he also had a plant based diet! And everything aligned when I was successful on my first try!

Now I have an amazing baby boy and I can't imagine life without him. And cherry on top, SSB Connects allows me the option to connect with other families who used my same donor.”

– Whitney Mixer, CA

OUR APPROACH

People matter. Each one of us is important. The approach that built Seattle Sperm Bank into a reliable, go-to resource for our clients is to **always put the individual first – our donors, our clients, our staff**. The fertility clinics we work with share this view.

As you start your journey to parenthood, we are here to offer **support, guidance, and advice** through every step. Having had the opportunity to serve thousands of clients over the years, we know that **a simple, straightforward process will result in the most satisfying and successful outcome for you**.

1 FIRST STEP

Visit www.seattlespermbank.com to start your donor search.

We offer a \$50 All-Access Donor Subscription that includes unlimited online access to detailed information about each donor.

2 SECOND STEP

Choose a donor, select a vial type (washed / IUI or unwashed / ICI) and decide how many vials you'll need for now and for possible future siblings. Please consult your physician if necessary.

3 THIRD STEP

Place your order online or call **(206) 588-1484** to order over the phone with assistance from one of our staff members who can answer any questions you may have. You can choose to store units with us or ship them directly to your clinic or home.

4 FOURTH STEP

Schedule your shipment to arrive at least 2-3 days prior to your scheduled insemination. Prior to shipment, make sure to submit the simple required form (**Purchaser Semen & Storage Agreement**).

For Home Deliveries and any deliveries to New York state, we also require the **Clinic Release Form** to be submitted.

“Fenway Health referred us to you in their AI orientation session. We could not be happier. Scarlett and Courtney were both amazing when we chatted with them. We had a ton of questions and they were both so helpful! Thanks to them both!”

Barbara, Boston, MA

FINDING THE BEST DONOR

Finding the right donor can take time. No one should ever feel rushed or that they are missing details. We offer extensive information on each of our donors. We strongly suggest a thorough review of a donor's Extended Profile before making your final decision.

We have made it easy to get a comprehensive view of each available donor. Our \$50 All-Access Donor Subscription allows you 3 months of unlimited online access to the following detailed information for each donor:

- Free Photo Matching
- Extended Donor Profile
- Childhood Photo
- Audio Interview
- Staff Impression
- Keirsey Temperament Sorter Result
- Hand-Written Donor Note
- Medical History
- Genetic Test Results

To view our available donors, begin by entering a couple of your preferred donor characteristics such as ethnicity, eye color, height, blood group, etc. If you have any questions, do not hesitate to call or email us at any time.

“ As a lesbian couple, it was important that we identify a donor who looks like my wife. With support from SSB we were able to narrow down our donors quickly.

Everyone at SSB was friendly, knowledgeable, and answered our questions thoughtfully.

Shipping was quick and on-time. Thanks SSB! ”

– Sarah

OPEN ID DONORS, A CHOICE FOR ALL FUTURES

WHAT IS AN OPEN ID DONOR?

This term means that a donor has agreed to at least one form of contact with any donation-born offspring once the child turns 18. In America, this is the fastest growing trend among sperm banks due to the transparency and comfort it provides. Seattle Sperm Bank was the first in the U.S. to specialize in providing this option to donor-conceived children. We feel that it's an important option for our clients and their families, and our catalog consists mostly of donors listed as such.

WHY WE FOCUS ON OPEN ID DONORS.

Why is it important to us? As children conceived from anonymous donors grow into adulthood, many lament the fact that policies of anonymity cut them off from half of their genetic inheritance. They may hunger to know more about their donor's story from family traits to life histories, even whether he was musically inclined. Such a sense of belonging is taken for granted by most of us, but for these kids, it can be sorely missed. Open identity sperm donation is intended to address this basic human desire, and that is why Seattle Sperm Bank specializes in Open ID donors.

WHAT DOES THIS MEAN FOR YOUR CHILD?

When a donor child reaches 18 years old, he or she may request to initiate contact with the donor through our bank. We will make the connection and arrange a mutually agreed-upon method of contact. It could be a meeting, a phone call, or simply an exchange of information. It will be a communication between two adults who will be able to decide how they best want to move forward. The child must initiate the contact, as patient and child identities are confidential and are never released to the sperm donors.

WHAT DOES THIS MEAN FOR YOUR DONOR?

All donors are required to go through a maturity evaluation by the sperm bank's managing director and donor coordinator. This is to ensure they understand the parameters and responsibilities associated with their decision of becoming an Open Identity Donor. Once the paperwork is submitted to Seattle Sperm Bank, an Open ID donor cannot switch to become an anonymous donor.

Sperm donors have no legal rights, responsibilities, or obligations to any children born through the use of their semen. There is no requirement that the donor commits to a long-term relationship with the child, although he and the child may arrange to have further communication.

WHAT DOES IT MEAN TO YOU?

While prospective parents don't get to meet their selected sperm donor, there is a lot to learn about donors through profile information. **At Seattle Sperm Bank, we have found that the Open Identity Donors are usually willing to provide more detailed content such as baby photos and extended essays to us.**

Many potential parents find security in knowing their child will be able to have some contact with their donor. However, even as an Open Identity Donor, there is no guarantee that the donor will have the same wishes as the parent and child beyond an initial contact. For more information/questions, please let us know and we will guide you through the process that our Open ID Donors experience.

DONOR QUALIFICATION

We built our reputation on donor qualification. In addition to our Open ID donor policy, we use industry-leading donor screening and extensive testing procedures to evaluate each donor to ensure that the donor sperm that we offer clients and fertility clinics is of the **highest possible quality**. We adhere strictly to FDA regulations of sperm banks as well as several international health authorities' screening guidelines.

Initially, our donors are selected by our in-house staff based on a number of specific parameters:

- Sperm Quality
- Age
- Personality
- Education
- Criminal Background Check
- 4-Generation Family Health History

In every **1,000** of our applicants, only **9** qualify for donation.

DONOR TESTING AND SCREENING

Our donors are initially screened by our sperm bank staff, based on these parameters:

- Sperm Quality
- Age
- Personality
- Physical Appearance
- Education
- Criminal Background Check
- 4 Generation Family Health History

Further screening includes:

- Physical Exam every 6 months (including EKG)
- ZIKA Virus risk assessment
- Chemistry Panel
- Complete Blood Count
- Hemoglobin Fractionation
- Urinalysis
- ABO-Rh Blood Typing
- HIV
- HTLV I/II
- Hepatitis B Surface Antigen
- Hepatitis B Core Antibody
- Hepatitis C Viral Antibody
- Syphilis
- CMV IgG/IgM
- Chlamydia
- Gonorrhea
- West Nile Virus

Patient Self Testing

- If you or your egg donor received extensive genetic testing and the results came back with a positive carrier status, we will work with you to select one of our donors who has already been tested and came back negative for the matching mutation. If your sperm donor choice has not been tested, we will help make that happen. To get this process started, please email us at genetics@seattlespermbank.com or call us at 206-588-1484.
- Would you like to receive extensive genetic testing? We can facilitate this to determine your genetic carrier status. Please contact us to initiate this process, or visit www.seattlespermbank.com/counsyl-carrier-screening/

Myriad Carrier Screening

Seattle Sperm Bank performs more genetic testing than any other sperm bank – including Myriad’s Foresight Carrier Screening of 175 conditions on all donors who entered our program after January 2018.

A comprehensive list of the mutations each donor has been tested for can be found on our website’s profile page of every donor. A negative test result reduces, but does not eliminate, the likelihood of the donor being a carrier. If you are a known carrier of a genetic condition please contact us and we will provide a list of donors who have been screened for that condition and found to be negative. If you do not know your carrier status, please email us at genetics@seattlespermbank.com or call us at 206-588-1484.

For our full list of donors and the Extended Genetic Testing they received, please see page 16 of this catalog & visit our website.

In the spirit of constant improvement, as knowledge and technology advance, we will continue to expand our genetic testing. As a result, not all donors have been tested for the same conditions or with the same methods. To help simplify this process, we developed an online tool to help you filter our donor list by those who have been tested and found negative for your selected genetic conditions. This tool can be used in conjunction with our other search criteria to help you narrow your selections and find the best match.

“I want to let you all know that throughout this whole process, working with you has been the easiest and most enjoyable part. I have been brought to tears on multiple occasions by your flexibility, care & sensitivity. THANK YOU SO MUCH.”

- Z. Saunders, Seattle, WA

EXTENSIVE GENETIC TESTING

CONDITIONS	A (Screening prior to Sept. 2015)	B (Screening Sept. 2015 – Aug. 2016)	C (Screening Sept 2016 – Dec 2017)	D (Screening after January, 2018)
Karyotyping, Cystic Fibrosis and Spinal Muscular Atrophy	A	B	C	D
Myriad Fundamental Panel Plus 21 Conditions		B	C	D
Myriad Universal Panel (102 total conditions) (minus x-linked diseases)			C	D
Myriad Foresight Panel 175 total conditions				D

For a complete list of all conditions, please visit our website www.SeattleSpermBank.com/counsyl-carrier-screening
For donors with Ashkenazi Jewish ancestry, see column B.

DONOR APPLICATION PROCESS:

- 1 Each donor applicant completes an initial written application.
{ Age and weight are common reasons for disqualification. }
- 2 Donor applicants visit office for first in-person screening.
{ Unsatisfactory semen quality is the most common reason for disqualification at this stage. }
- 3 Applicants have their second office visit for genetic history interview.
{ His medical history or that of his family are common reasons for disqualification here. }
- 4 Applicants undergo blood chemistry, urine, genetic, and infectious disease testing.
{ Out-of-range lab results or positive diagnosis are common reasons for disqualification. }
- 5 Applicants are screened by a Licensed Genetic Counselor.
{ Positive carrier status for concerning genetic indicators result in applicant disqualification. }
- 6 Final review and approval by our Medical Director.
{ Applicants are disqualified in this step based on suitability concerns by licensed physician. }

Once qualified and accepted into the program, donors are subjected to ONGOING SCREENING.

EVERY DONATION > screen analysis, review of health and sexual changes

EVERY 2 MONTHS > test for gonorrhea and chlamydia

EVERY 3 MONTHS > test for infectious diseases, update assessments

EVERY 6 MONTHS > physical exam by licensed physician for release of quarantined vials

WHAT YOU SHOULD KNOW ABOUT CMV

CYTOMEGALOVIRUS, or CMV, is a member of the herpes virus family which includes cold sores, chickenpox, and infectious mononucleosis. It is a common virus known to infect people from all populations and ages. In developed countries, 50%-85% of adults have been infected by age 40. Once a person becomes infected and passes the initial illness, the virus lies dormant in their body for the rest of their life with little risk of recurrent infection or reactivation. Unfortunately, there is no vaccine for CMV.

In healthy adults and children, symptoms of an active CMV infection are usually mild and could be mistaken for a cold or the flu. The affected person should fully recover in a week or two with no lasting effects. During an active infection, the virus is shed in body fluids, which means it can be contracted through exposure to urine, saliva, blood, tears, breast milk and semen.

Couples in which one partner contracts the virus will typically pass it on to the other through kissing and intimate contact which results in both partners sharing the same CMV status and mutual, natural immunity. However, it is impossible to be certain of your CMV status without obtaining a blood test.

WHY IS THIS IMPORTANT REGARDING PREGNANCY AND DONOR SPERM CHOICE?

If a woman has never encountered CMV and has her first exposure during pregnancy, there is a 30%-40% chance of her fetus being infected as well. The majority of children who experienced a CMV infection before birth are healthy and normal. However, 10%-15% may have complications such as hearing loss, neurological abnormalities, or decreased motor skills. Note that infants who are infected with CMV after birth rarely experience any long-term complications.

To reduce the risk of adverse pregnancy outcomes, any woman planning to use donor sperm to conceive should have her CMV status tested.

WHAT TYPE OF CMV TESTING DO SPERM DONORS GO THROUGH?

Donors are given an initial CMV screening to determine their CMV status. All donors with an active infection are barred from donating until the donor tests IgM negative. Any potentially affected vials are discarded. Donors are tested every 3-6 months for their CMV status.

For more in-depth information on CMV, please consult your physician and refer to the CDC (<http://www.cdc.gov/cmV/index.html>) for more information.

THE DIFFERENT METHODS OF INSEMINATION

There are several options when it comes to insemination. It is best to consult with your healthcare professional about which method is most appropriate for your circumstances. Your medical provider can provide guidance on the type and quantity of vials recommended for the procedure you will be undergoing.

CLINIC INSEMINATIONS

The procedures used for intrauterine insemination (IUI) and intracervical insemination (ICI) are somewhat similar. Inseminations must be precisely timed based on a woman's natural cycle or in conjunction with fertility medications intended to induce ovulation.

The woman is normally positioned on an examination table as if in preparation for a pelvic exam. A speculum is placed in the vagina so the cervix is visible. A sperm sample is then inserted through the cervical opening using an insemination catheter attached to a syringe. For an ICI procedure, the sample is injected into the vagina. For an IUI procedure, the sample is injected directly into the uterus. Of the two procedures, IUI is commonly believed to have a slightly better success rate than ICI.

HOME INSEMINATION

Artificial insemination can be done at home and performed on oneself or by their partner with either IUI or ICI vials. Home inseminations involve the use of a syringe or a cervical cap to place the sperm as close to the cervix as possible at the correct time in the woman's cycle.

For women who are free of fertility issues, home insemination can save on cost due to the absence of medical office fees, although a licensed practitioner must agree to sign the required release paperwork. Despite pregnancy rates not being as high with this method, many women choose to make this a starting point in their fertility journey and do find success.

IN VITRO FERTILIZATION

In vitro fertilization (IVF) is a process by which fertilization is performed outside of the body. IVF may involve any combination of your own eggs and sperm or those from a donor. After egg and sperm cells have been harvested from the patient or obtained from a donor source, they are brought together in a laboratory environment under optimal conditions to allow the sperm to fertilize the eggs.

About 2 to 5 days after fertilization, one or more of the best embryos are inserted into the uterus with a catheter. The remaining embryos may be cryopreserved for future use. For any ART/IVF procedures, ART-ICI samples can be purchased from SSB, but as with our premium ICI vials, they must first be "washed" by your fertility professional.

Due to the extensive preparation and delicate nature of an IVF cycle, fertility clinics will frequently require you to provide two samples – one for immediate use and an extra one for backup.

SPECIMEN TYPES

Seattle Sperm Bank offers different vial types for different applications and fertilization techniques.

- IUI: Specimens prepared for Intrauterine Insemination (IUI)
- ICI: Specimens prepared for Intracervical Insemination (ICI)
- ART Units: Those units which are lower in concentration than our Standard units, and do not have a minimum count guarantee. ART units are typically used for IVF/ICSI treatments but can also be used for IUI treatments. We recommend speaking with your physician first before purchasing ART units for IUI treatment.

INTRAUTERINE INSEMINATION

Semen that has been prepared for Intrauterine Insemination is known as an IUI specimen. These vials are sold in a .5 ml volume and when properly stored and thawed, are guaranteed to contain at least 10 Million motile cells. They are also referred to as “washed” samples because the processing they are put through separates the live sperm from the seminal fluid. That fluid is then replaced with a cryopreservant before the sample is frozen.

This type of specimen is required for IUI procedures because the dead sperm, white blood cells and prostaglandins found in unwashed semen not only interfere with the fertilization process, but they can also cause cramping and pain when inserted directly into the uterus.

INTRACERVICAL INSEMINATION

Semen that has been prepared for Intracervical Insemination is known as an ICI specimen. These vials are sold in a 1.0 ml volume. When properly stored and thawed, they are guaranteed to contain at least 15 Million motile cells. These vials can also be referred to as “unwashed” because they are not processed. These samples retain all of the naturally occurring seminal fluid and cells. There will be plenty of motile sperm, but dead sperm are also still present.

The cervix and cervical fluid will only allow the highly motile sperm cells to make it into the uterus and fallopian tubes, just as it happens through intercourse. Due to the nature of raw semen, these samples are suitable for intracervical and at-home inseminations only unless they are washed by your fertility specialist.

ART

In addition to our core vial options, Seattle Sperm Bank also offers what are known as ART samples.

Available in both IUI and ICI preparations, these vials are priced at a discount because they contain fewer total motile cells than our guaranteed premium vials. IUI ART vials contain 5-9 Million motile sperm in a .5 ml volume and ICI ART vials contain 5-14 Million motile sperm in a 1.0 ml volume.

These numbers are more than sufficient for use in Assisted Reproductive Technology procedures such as IVF, ICSI, GIFT & ZIFT. In other circumstances, ART vials can be used successfully on their own or combined in multiples for standard insemination techniques.

Please speak with your physician to determine the right product for you. We will then work with you to match the product and requested donor for a final product sample.

DONOR SEARCH

Selecting a donor is a big decision and one that our clients may find to be difficult from time to time. There is no one-size-fits-all donor choice, but instead one that you will make based on what works best for you based on the criteria that you and your family have prioritized. **We are here to work with you in selecting the specifics that are important to you, and we will guide you through the selection process to make sure that you feel confident in your decision.**

DONOR CATALOG

For you to have an opportunity to find the best donor for you, we are committed to having the best donor options available to you at all times. Our donors are more than just a number to us, and we dedicate the time we need to get to know each donor on a personal level which also allows us to provide insightful staff evaluations and in-depth materials to better help you choose the right donor for your family.

To make selecting your donor easy and affordable, we developed an online library that grants you unlimited info on every donor in our current catalog. You can peruse basic information on each donor or choose to purchase an **All-Access Donor Subscription** that allows for extended profiles, downloads of all baby photos, audio interviews, Keirse Personality evaluations, and hand-written messages. The cost for our All-Access Donor Subscription is \$50 and can be accessed on our website at, seattlespermbank.com.

DONOR CATALOG

This section is your opportunity to review available donors, their basic information, background and history.

To get an extended profile on every donor, please visit our website.

Please note, while we are proud to provide a wide range of donors, our vial supply is ever-changing and often-times limited in quantity. Therefore, due to demand, we cannot guarantee your favorite donor's vials and recommend planning ahead by purchasing extra samples and placing them in storage for later use. Storage is complimentary for the first year when you purchase five or more vials.

All available donors are included at the time of this catalog printing, but extra vials and donors might become available and in storage. Please check our website at seattlespermbank.com or call us at **206.588.1484** for the most accurate and up-to-date inventory status.

“ Working with SSB has been nothing short of wonderful. Their customer service team is exceptional. They are always there to answer any and all questions, no matter how small they may seem. I couldn't imagine working with another bank! ”

– Julianne

VIAL BUY-BACK PROGRAM

We are proud to offer our clients the Seattle Sperm Bank Vial Buy-Back Program – an additional value-added service for those who purchase multiple vials up front, either for multiple attempts and/or additional pregnancies. Purchasing enough vials for your needs up front ensures access to your chosen donor when you are ready, and our buy-back program allows you to return unused vials if needed.

BUY-BACK

As part of our ongoing commitment to you as a client, our buy-back option was implemented to offer the option to return a purchased vial for 50% of the original purchase price.

Please note: In an effort to ensure the quality of the product that we offer our clients, all vials must have been purchased within 24 months and stored at Seattle Sperm Bank in order to be eligible for the buy-back program. Samples that have left our facility are no longer eligible for the buy-back program. For additional information please contact us at cs@seattlespermbank.com or 206.588.1484.

PURCHASE, SHIPPING AND STORAGE

Once you have found your donor of choice, you can either purchase vials on the Website or call us at 206.588.1484.

Prior to shipping the vials, the necessary agreements and releases need to be completed. Our **Purchaser Semen and Storage Agreement** outlines the terms you and Seattle Sperm Bank agree to in purchasing, storing and/or using donor semen. Every client is asked to complete this form and return it to us before vials are received.

The **Clinic Release Form** provides prior written authorization from the licensed health care professional you are working with. This document applies to purchases from clients who request to have vials delivered to any location in New York State or a location that is not a clinic (i.e. for an at-home insemination). For New York State clients, this form can only be signed by a physician, physician's assistant or nurse practitioner. For at-home inseminations, it can be completed by a physician or other licensed health care personnel. Both forms may be submitted via fax or email.

For any donor that is known carrier of any genetic conditions we screen for, we require that the recipient fill out an **informed Consent** based on donor's carrier status. This Informed Consent can be filled out solely by the recipient, and allows for the recipient to deny additional testing for themselves, or for the recipient to request Seattle Sperm Bank facilitate them getting genetically tested.

We offer several options for you in shipping and/or storing your vials. We ship to any Fertility Clinic and to residential addresses in the United States. We also ship directly to many destinations worldwide.

SHIPPING

Two-Day Shipping with Return

\$100 – to WA, OR, CA

\$180 – all other states

Overnight Shipping

While we encourage everyone to plan for their shipments to arrive a couple of days prior the scheduled insemination, we offer OVERNIGHT SHIPPING at an additional \$100. (All orders need to be placed prior to 1 pm PST to ship the same day.)

STORAGE

We offer several convenient and affordable storage options for our clients, including the 2-month FREE STORAGE benefit that accompanies all orders.

Included With Purchase

1 Vial: 2 Months FREE

2-4 Vials: 6 Months FREE

5+ Vials: 12 Months FREE

Additional Storage

1 Month: \$100

6 Months: \$200

12 Months: \$350

24 Months: \$500

5 Years: \$1,000

Sibling Storage

2 Years: \$400

5 Years: \$800

*We offer discounted Sibling Storage rates for those who already have a child or a current pregnancy with one of our donors.

Thank you for allowing us to Walk you through the process.

The team of professionals at Seattle Sperm Bank love hearing about happy families we help create. Our goal is to be here for you as you take this life-changing step. We offer the resources of larger clinics, but we operate on a first-name basis with our parents-to-be. So many questions are in your head already. Our team will be communicative and straightforward while we help you find the ideal match.

Please talk to us if you have questions about our testing process, library of donors, our Open Identity program or any questions about your next steps.
